Bundled Product Discounting Setup (Non-Package Items)

1. Go to **Inventory** Menu, choose **Setup**, then **Product Discounting Setup**, and click **Add Discount** to create a new price band (product bundle discount).
2. Enter a **name** for the discount so you can assign it to products later.
3. Choose **Mix-n-Match: Yes or No**.
   - Select **Yes** if you want all products using this discount to count together toward the quantity needed for the lower sale price.
   - Select **No** if each product must reach the quantity threshold on its own.
4. In **Band Minimum Values**, start with **1**, then add each quantity level where the price should drop (for example: 1, 7, 14).
5. In **Band Prices**, enter the matching price for each tier in the same order (for example: $5.00, $4.50, $4.00). Each price corresponds to the quantity tier in the same position.
6. Save the price band, then open **Products & Services**, edit a product, and choose your new price band from the **Price Band / Discount Plan** dropdown.
7. Save the product, and the discount will now apply automatically at checkout based on the quantities purchased and whether mix-n-match is enabled.
